French Montana  
via "contact us" on [FrenchMontana.com](http://FrenchMontana.com)

Dear Mr. Montana,

A year ago we wrote to you after you posed with Princess, a diapered infant chimpanzee, in an Instagram video. We were surprised to see a new video that you posted on May 28, 2018 that features a pet capuchin monkey (yours?) named Julius.

Condoning private ownership of primates gives the world a very inaccurate message about these complex and intelligent animals. Encouraging contact between humans and exotic animals is harmful and dangerous to all involved. As experts in the field of primate care, we implore you to reconsider promoting such irresponsible treatment of animals.

The North American Primate Sanctuary Alliance (NAPSA) is a coalition of ten of the leading primate sanctuaries on the continent. In our sanctuaries, we care for over 730 primates, many of whom were formerly privately owned and living in human homes. We are contacted daily by people who purchased a baby monkey (often after seeing one glorified in the media) and then lived to regret it. Monkeys quickly grow to be strong, cunning and difficult to manage. They can transfer disease and destroy homes. They can bite and injure their owners, including children. It is simply not possible to fulfill the unique needs of a monkey within a private home. Once people realize the expense and dedication required to care for a monkey, many attempt to place their monkeys at a sanctuary, but it can be problematic to find an accredited sanctuary that has space to take "pet" monkeys. Most primate sanctuaries have lengthy waiting lists.

Attached is NAPSA's Position Statement on the private ownership of primates so you may learn more about why keeping a monkey as a pet is so harmful, and why this is not something that should be promoted to your millions of social media followers.

One of our member sanctuaries would be happy to welcome Julius into a lifetime of appropriate monkey life, where he can live and play with others of his own kind. We could then join you in a campaign celebrating that you made the right choice. Others would follow your lead. This would be a wonderful thing to do as a tribute to Julius. Or, we would be just as happy to handle Julius's sanctuary placement under the radar. Regardless, please reconsider the message you spread to your followers. Use your celebrity status to promote true love, respect and proper treatment for all animals. Primates should never be pets.

Sincerely,  
  
Erika Fleury  
Program Director

## **Advocacy Position Statement Private Ownership of Primates**

The North American Primate Sanctuary Alliance (NAPSA) is opposed to the private ownership of primates.

Unlike dogs and cats, apes and monkeys are not domesticated animals. Non-human primates are extremely social animals whose normal development requires the company of others of their own kind. Ideally, primates should live in the wild. Their natural habitats include species-typical social groups that allow them to learn from their families and have a rich emotional life. In reality, however, there is an active industry that breeds primates to sell as pets in human homes.

As infants, primates in the pet trade are removed from their mothers years before they would naturally separate, which causes psychological suffering that manifests throughout their entire life. Teeth are often removed for ease of handling, which can limit the foods they can eat. Qualified veterinary care for pet primates can be difficult, if not impossible, to find.

Primates are inquisitive animals whose proper care requires daily mental stimulation and extensive physical activity, which is often impossible for the average household to provide. Primates kept in human homes are rarely, if ever, monitored by animal welfare officials, which means they are often kept in unsuitable living conditions resulting in neglect, mistreatment, and myriad psychological and physical ailments that can lead to death. There are a range of zoonotic diseases that are transmitted by primates and can be harmful, even fatal, to humans.

Once primates reach adolescence, which can be just a few years into a 40+ year lifespan, they inevitably become too unmanageable to handle. Primates can and will bite. They have strong jaws and sharp teeth, and bites can result in significant and potentially fatal injuries to humans. Realizing that living with an adult primate is not sustainable, owners often seek to surrender their pets or are forced to surrender them due to a threat to public safety.

Many primates that were privately owned end up living in roadside zoos, recycled as breeders to produce the next generation of ill-fated pets, or in other abusive situations. In the best cases, former pets may end up in a NAPSA member sanctuary, where they live their remaining years in an enriched environment more typical to their species. Even in sanctuary, former pets often struggle with learning how to socialize with other primates and many exhibit abnormal behaviors for the rest of their lives.

The private ownership of primates is never in the best interest of the animal or the owner.
